G General or Review.

Abstract

The author presents an overview of the application of UHF and microwave technology to search and rescue. Automatic alerting and positioning of ships and aircraft in distress has been in use since the early 1980s with the development of the COSPAS-SARSAT satellite aided distress system. Final **location** has been by dedicated search and rescue resources, using direction finding equipment to **home** on VHF transmitters. The development of miniaturised, low cost radar transponders has made it possible for any ship to use its radar to **home** on survival craft. Further development could provide a viable product for use on lifejackets to aid **location** in man overboard situations. (5 refs).

Descriptors

emergency-services; radar-applications; radar-equipment; transponders.

Keywords

UHF technology; miniaturised transponders; microwave technology; search and rescue; ships; aircraft; COSPAS SARSAT satellite aided distress system; radar transponders; survival craft; lifejackets; man overboard situations.

Classification codes

B6320 (Radar equipment, systems and applications).
